Planning & Urban Design

Structural Engineering

Sustainability + Building Performance

Consulting

Seneca College is Ontario's largest college, with approximately 20,000 full-time students and 70,000 part time students enrolled in four campuses in the greater Toronto area. The four-storey facility is a living lab with exposed systems, flexible for future adaptations, and providing a welcoming atmosphere for student learning and interaction. An engaging gateway to the campus, Building A provides an additional 1,000 student seats and includes classrooms, computer labs, common areas, circulation, and an information commons. The building was completed on time and on budget via a two-year fast-track construction schedule as a part of the federal government's Knowledge Infrastructure Program.
